

# MS 250

## HYDRAULIC CUTTER

The tool has been designed for the quick cutting of metal round bars or profiles.

Solid and dependable, the shear can easily stand the heavy duty employment of the car demolition and metal recycling industry.

Light and quick, it is the irreplaceable partner in critical operative situations like vehicle rescue and civil protection missions.

**LIGHT AND QUICK**

**SOLID AND  
DEPENDABLE**

**EXTREMELY  
POWERFUL**

**IDEAL FOR  
PRECISE CUTS**

The special metal insert (wear-resistant alloy) ensures a long life to the blade.

#### TECHNICAL DATA

<b>MOUTH OPENING</b>	250 mm	<b>PRESSURE</b>	620 bar max
<b>MOUTH DEPTH</b>	135 mm	<b>DIMENSIONS</b>	240 x h190 x 810 mm
<b>CUTTING DIAMETER</b>	Ø 30 mm/STEEL	<b>WEIGHT</b>	20,5 kg

## Functional Features

The blades are designed with a special geometry that allows to retain and push towards the center the object that you are cutting.

Made of special steel, the blades assures a long life span. Once worn out they can be sharpened or you can replace the metal insert in few steps.

## Typical use

- Cutting of metal profiles and construction structures (reinforced mesh, steel rebars).
- Car demolition and metal recycling industry.
- For recycling of precious car parts as catalytic converters and mufflers.
- In rescue after car, railway and plane accidents for victims extrication.
